EDUCATION

Drexel University – Pennoni Honors College
Bachelor of Science in Computer Science | GPA: 3.96/4.00

Philadelphia, PA
Sep. 2025 – June 2030

TECHNICAL SKILLS

Primary Language: Python (advanced)
Python Libraries: Scikit-Learn, Pandas, NumPy, FastAPI, Matplotlib
Other Languages: Java, JavaScript, TypeScript, HTML/CSS, SQL (Postgres), MySQL
Frameworks: React, Next.js, TailwindCSS, Prisma
Tools & Databases: Git, GitHub, Supabase, Vercel, Clerk, Neon, AWS, Firebase
Concepts: OOP, Data Structures & Algorithms, REST APIs, Machine Learning, Feature Engineering, Model Evaluation, NLP, LLM Integration, Agile

PROJECTS

MarketPulse | *Python, Scikit-Learn, Groq API, FastAPI, NewsAPI, Supabase* Jan. 2026 – Present
Stock forecasting app using a Random Forest model and live NLP sentiment to project price direction up to 30 days out.

- Trained a 300-tree Random Forest on 1,200+ daily records across 27 engineered features; used a temporal 80/20 split with shuffle=False to prevent data leakage, achieving a holdout MAE of \$2.08 vs. a \$2.45 naive baseline — a 15% error reduction.
- Fetches live headlines via NewsAPI, scores each with Groq LLM for sentiment and relevance, then computed a relevance-weighted sentiment signal rather than a raw average; deployed on Render with Stooq data sources.
- Built a sliding-window in-memory rate limiter across predict, chat, and admin scopes with per-IP SHA-256 hashing; wrote a pytest suite with 15+ cases covering temporal split logic, API endpoints, and sentinel behavior.

Sixth & Market | *React 19, TypeScript, Express.js, Firebase, Groq API, Leaflet* Mar. 2026
Civic platform built for Codefest 2026 that rewrites generic 311 reports, detects duplicate issues, and maps broadband dead zones.

- Built a full-stack app using React 19 and a hardened Express.js security proxy, routing all Groq API calls server-side so keys are never exposed in the client bundle; enforced rate limiting, Zod input validation, and SSRF protection.
- Engineered a predictive dead zone detection system combining FCC Broadband Map data, U.S. Census demographic signals, and live Firebase complaint density into a weighted risk scoring algorithm on an interactive Leaflet map.

PrepGO | *Next.js, TypeScript, React, PostgreSQL, Neon, TailwindCSS* Aug. 2024 – Mar. 2026
SAT prep platform serving 30+ active users across 250+ reading and math questions, built and deployed with a team of three.

- Designed a normalized PostgreSQL schema across 10 tables with 12 REST API routes; secured the app with JWT, HTTP-only cookies, and bcrypt, hardening against XSS and SQL injection.
- Built a peer messaging system on serverless Neon routes and wrote automated migration scripts that cut manual deployment steps between releases.

EXPERIENCE

Software Engineering Intern Jun. 2025 – Sep. 2025
CodeHS *Chicago, IL*

- Attended production PR reviews under senior engineer mentorship, reading logic and style feedback on a codebase used by thousands of students across the U.S.
- Worked in the same Git and Agile cadence as full-time engineers: feature branches, PR submissions, review cycles, and merges on real sprint work.

LEADERSHIP & VOLUNTEERING

Youth Co-Coordinator Sep. 2025 – Present
Bochasanvasi Shri Akshar Purushottam Sanstha

- Co-managed a team of 15 volunteers across community events, coordinating logistics and maintaining attendance records to keep programs on schedule.
- Grew program attendance from 25 to 40+ participants by restructuring event format and streamlining volunteer communication.
